TOPIC 11.2: ALKANES

random|plasmid

Chromosomes and plasmids are both made of DNA. Chromosomes are large molecules of DNA that contain the genetic information needed to construct and maintain a cell. Plasmids are small, circular molecules of DNA that can replicate independently of the chromosome. They often carry genes that confer resistance to antibiotics or other selective advantages.

THE ABOUT

CHAPTER ANALYSIS

MASTERY

- Important topic
- Take note of 'isomerism'

EXAM

- Alkanes are tested lightly
- Explanation for physical properties is applicable to all other hydrocarbon compounds as well*

WEIGHTAGE

- Heavy overall weightage
- Entire Organic Chemistry portion accounts for 15-20% of each year's Chemistry paper

KEY CONCEPT

ALKANES

HOMOLOGOUS SERIES

FUNCTIONAL GROUP

GENERAL FORMULA

Name	Carbon atoms	Molecular Formula	Full Structural Formula	Condensed structural formula
Methane	1	CH ₄	<pre> H H — C — H H </pre>	CH ₄
Ethane	2	C ₂ H ₆	<pre> H H H — C — C — H H H </pre>	CH ₃ CH ₃
Propane	3	C ₃ H ₈	<pre> H H H H — C — C — C — H H H H </pre>	CH ₃ CH ₂ CH ₃
Butane	4	C ₄ H ₁₀	<pre> H H H H H — C — C — C — C — H H H H H </pre>	CH ₃ CH ₂ CH ₂ CH ₃

Homologous series: Alkanes

Alkanes contain only carbon-carbon single covalent bonds and carbon-hydrogen single covalent bonds.

Alkanes are '**saturated**' as every carbon atom is bonded to its maximum of four atoms.

Functional group

Alkanes have **no functional group**.

General Formula

Alkanes have a **general formula** of **C_nH_{2n+2}**.

KEY CONCEPT

ALKANES

PHYSICAL PROPERTIES

CHEMICAL PROPERTIES

ISOMERISM

PHYSICAL PROPERTIES

Physical property	Reasoning
Melting and boiling points	The boiling points of alkanes increase as the number of carbon atoms in the alkane increases.
	As the relative molecular mass of the alkane increases, the strength of intermolecular forces of attraction between the molecules increases. As such, more energy is needed to overcome the intermolecular forces of attraction between the larger molecules.
	Hence, alkanes containing more carbon atoms have higher boiling points.
Volatility	The higher the relative molecular mass of an alkane, the less volatile it is.
	The intermolecular forces of attraction between large alkane molecules are stronger than that between smaller alkane molecules.
	Hence, larger alkane molecules that are liquid at room temperature are less likely to evaporate.
Density	The higher the relative molecular mass of an alkane, the higher the density.
Viscosity	The higher the relative molecular mass of an alkane, the higher its viscosity.
	Alkanes with longer hydrocarbon chains tangles together and flow less easily.
Flammability	The higher the relative molecular mass of an alkane, the lower the flammability.
	The larger alkanes contain a higher percentage of carbon and produce a smokier flame as incomplete combustion is more likely to occur.
Solubility	All alkanes are insoluble in water but are soluble in organic solvents such as benzene and ethanol.

CHEMICAL REACTIONS

SUBSTITUTION

COMBUSTION

SUBSTITUTION

In the presence of **ultraviolet (UV) light**, alkanes react with halogens via a substitution reaction.

A substitution reaction occurs when one atom or a group of atoms is replaced by another atom or group of atoms.

For example,

COMBUSTION

When an alkane undergoes **complete combustion** in excess oxygen, the products formed will be **carbon dioxide and water**.

For instance, methane undergoes complete combustion in excess oxygen:

When there is an insufficient supply of oxygen, incomplete combustion of the alkane occurs.

Water and carbon monoxide are produced.

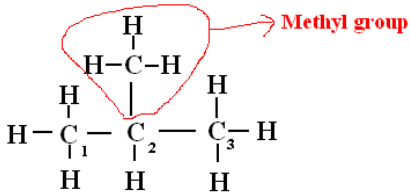

ISOMERISM (ALKANE)

ISOMERISM

Isomers are compounds with **the same molecular formula** but **different structural formula**.

Alkanes containing **at least four carbon atoms** display isomerism.

Alkane	Isomers	Structural formula	
Butane	2	$ \begin{array}{cccc} \text{H} & \text{H} & \text{H} & \text{H} \\ & & & \\ \text{H}-\text{C}_1 & - & \text{C}_2 & - & \text{C}_3 & - & \text{C}_4-\text{H} \\ & & & \\ \text{H} & \text{H} & \text{H} & \text{H} \end{array} $ <p>n-butane</p>	 <p>2 -Methyl propane</p>
Pentane	3	$\text{CH}_3 - \text{CH}_2 - \text{CH}_2 - \text{CH}_2 - \text{CH}_3$ <p>Pentane</p>	$ \begin{array}{c} \text{CH}_3 - \text{CH}_2 - \text{CH} - \text{CH}_3 \\ \\ \text{CH}_3 \end{array} $ <p>2 - Methylbutane</p> $ \begin{array}{c} \text{CH}_3 \\ \\ \text{CH}_3 - \text{C} - \text{CH}_3 \\ \\ \text{CH}_3 \end{array} $ <p>2,2 - Dimethylpentane</p>

ISOMERISM (ALKANE)

ISOMERISM

The name of each isomer is derived based on the substituent group it contains and the longest carbon chain it contains.

Isomers have **similar chemical properties** but **slightly different physical properties such as different boiling points & density**.

Carbon atoms	Prefix	Substituent Group
1	Methyl	-CH ₃
2	Ethyl	-CH ₂ CH ₃
3	Propyl	-CH ₂ CH ₂ CH ₃

POLYMER

**Condensation
Polymerisation**
(elimination of water)

LONG CHAIN ALKANE

H₂ gas
(For Haber process)

Catalytic Cracking
(Al₂O₃ & SiO₂, 600 °C)

**Addition
Polymerisation**
(High temp &
pressure)

SUGAR

Fermentation
(37°C, yeast & no O₂)

Hydration
(300 °C & 60-70 atm, Phosphoric(V) acid)

Oxidation
(acidified aqueous potassium
manganate(VII) / exposed to air)

ALKANE

C - C

Hydrogenation
(200 °C & nickel)

ALKENE

C = C

ALCOHOL

-OH

CARBOXYLIC ACID

-COOH

Substitution
(UV light)

Bromination
(Test for C=C bonds)

Esterification
(warm, sulfuric acid)

ESTER + H₂O
-COO-

Prefix

Meth- 1
Eth- 2
Prop- 3
But- 4
Pent- 5
Hex- 6
Hep- 7
Oct- 8
Non- 9
Dec- 10

ALL ORGANIC COMPOUNDS
Complete Combustion

Incomplete Combustion

'O' levels crash course program

Professionally designed crash course to help you get a **condensed revision** before your 'O' Levels!

The **4 hour session** focuses on going through **key concepts** and **identifying commonly tested questions!**

Our **specialist tutors** will also impart valuable **exam pointers and tips** to help you maximise your preparation and ace your upcoming national exam!

The crash courses will begin in **June 2021** and last till **Oct 2021**.

Pre-register now on our [website](http://www.overmugged.com) and secure your slots!
